

FACEBOOK ADS PRACTICE CAMPAIGN

SIMULATED CAMPAIGN • LEAD GENERATION

Unified Mentor Capstone Project

A complete simulated campaign proposal, creative plan, analytics & optimization report

**PROJECT TYPE****Practice / Simulated Campaign****PRIMARY OBJECTIVE****Lead Generation****MARKET****India**

Build Job-Ready Digital Skills

Digital Marketing • SEO • Google Ads • Facebook Ads • AI & Analytics

Academic/practice project. Performance figures in this report are hypothetical projections and are not represented as live advertising results.

1. Executive Summary

This project presents a complete Facebook Ads practice campaign for **LearnSphere**, a fictional online learning and career-development platform. The campaign is designed to generate qualified leads from students, graduates and young professionals in India who are interested in job-ready digital skills.

The campaign combines three creative formats—single-image, short-form video and carousel ads—with audience segmentation, a hypothetical ■10,000 budget, placement planning, A/B testing, retargeting and performance analysis.

Core strategy: attract relevant learners with practical career-focused messaging, capture leads through a clear call-to-action, compare creative/audience performance, and shift future budget toward the strongest combinations.

Project Element	Plan
Business	LearnSphere – Online Learning & Career Development
Primary Objective	Lead Generation
Market	India
Core Audience	Students, graduates and young professionals
Hypothetical Budget	■10,000 for 10 days
Creative Formats	Image, Video and Carousel
Campaign Status	Practice / Simulated

2. Business Overview

Brand: LearnSphere

LearnSphere is a fictional digital learning platform focused on practical, career-oriented courses. Its positioning is built around accessible learning, practical projects and skills that can support internships, freelance opportunities and entry-level careers.

Proposed Course Portfolio

Course Area	Example Offer
Digital Marketing	Digital marketing fundamentals and campaign planning
SEO	Search optimization, keyword research and content strategy
Google Ads	Search campaigns, bidding, targeting and measurement
Facebook Ads	Campaign setup, creatives, audiences and analytics
AI & Analytics	AI productivity, analytics fundamentals and reporting

Unique Value Proposition

“Learn practical digital skills, build projects, and move closer to your career goals.”

3. Campaign Objectives

Primary Objective

Generate qualified leads from people who are actively interested in digital skills and online career development.

Secondary Objectives

Objective	Purpose	Success Indicator
Lead Generation	Capture course enquiries/registrations	Leads and CPL
Engagement	Identify high-interest audiences	CTR and engagement
Traffic	Drive relevant users toward the learning offer	Clicks and landing-page visits
Learning	Test creatives and audience segments	A/B test results

4. Target Audience Strategy

The audience is divided into three practical segments so that the campaign can compare different learner profiles rather than treating the entire market as one group.

Segment	Age	Profile	Relevant Interests
Students	18–24	College students seeking practical skills	Online learning, digital marketing, AI, career development
Graduates	22–30	Graduates preparing for jobs/internships	Professional development, technology, online courses
Young Professionals	23–30	Early-career people upgrading skills	Digital marketing, analytics, entrepreneurship, technology

Ideal Learner Persona

Attribute	Persona
Name	Rahul (illustrative persona)
Age	21
Status	College student / early career learner
Need	Job-ready practical digital skills
Pain Point	Uncertainty about which skills and projects will help with career growth
Motivation	Internship, portfolio building and employability
Desired Action	Register for a course / request information

5. Budget & Bid Allocation

For this practice project, a hypothetical budget of **₹10,000** is used to demonstrate budget planning. No claim is made that this amount was actually spent.

Ad Set	Daily Budget	10-Day Budget	Share
Students	₹400	₹4,000	40%
Graduates	₹300	₹3,000	30%
Young Professionals	₹300	₹3,000	30%
Total	₹1,000	₹10,000	100%

Budget logic: Students receive the largest initial allocation because the offer is highly relevant to skill-building and early-career learning. Future budget should be shifted based on actual performance rather than assumed results.

6. Ad Creative Strategy

Three complementary formats are planned. The purpose is to test whether a simple value-focused image, a short video story or a multi-course carousel produces stronger response.

Creative 1 — Single Image Ad

Primary Text: **Want to build job-ready digital skills? Learn practical Digital Marketing, SEO, Google Ads and more through project-focused learning.**

Headline: **Build Job-Ready Digital Skills** CTA: **Learn More**

7. Video & Carousel Creative Concepts

Creative 2 — Short Video Ad

15–30 second storyboard:

0–3 sec: “Want to build a digital career?”

3–8 sec: Show Digital Marketing / SEO / Google Ads course titles.

8–15 sec: “Learn through practical projects.”

15–22 sec: “Build skills. Build your portfolio.”

Final frame: “Start Learning Today — Learn More.”

Creative 3 — Carousel Ad

Card	Headline	Message
1	Digital Marketing	Learn campaign fundamentals
2	SEO	Understand search and content strategy
3	Google Ads	Practice paid search concepts
4	Facebook Ads	Learn targeting and optimization
5	AI & Analytics	Develop modern digital skills

Carousel CTA: **Learn More**

8. Campaign Setup Framework

The campaign structure follows the standard hierarchy used in Meta advertising: Campaign → Ad Set → Ad.

Level	Example Setup
Campaign	LearnSphere – Lead Generation – India
Objective	Leads
Ad Set 1	Students – 18–24 – India
Ad Set 2	Graduates – 22–30 – India
Ad Set 3	Young Professionals – 23–30 – India
Ads	Image Ad, Video Ad, Carousel Ad

Placement Strategy

Initial testing can include Facebook Feed, Instagram Feed, Stories and Reels. Performance should be compared by placement before reallocating budget.

Conversion Path

Ad → Landing Page / Lead Form → Course Information → Enquiry/Registration

9. Ad Copy Bank

Version A — Career Focus

Primary Text: Want to build job-ready digital skills? Learn Digital Marketing, SEO, Google Ads and more through practical, project-focused learning.

Headline: Build Job-Ready Digital Skills

CTA: Learn More

Version B — Student Focus

Primary Text: College student looking for practical skills? Explore digital courses designed to help you learn, practice and build a stronger portfolio.

Headline: Turn Learning Into Practical Skills

CTA: Sign Up

Version C — Skill Upgrade

Primary Text: Upgrade your digital skill set with practical learning in marketing, advertising, analytics and AI.

Headline: Upgrade Your Digital Skills

CTA: Learn More

10. Analytics & Reporting

Because this is a practice/simulated campaign, the following figures are **hypothetical projections** created to demonstrate how campaign reporting should be presented.

Metric	Projected Value	Interpretation
Budget	■10,000	Planned practice budget
Reach	25,000	Estimated unique users reached
Impressions	32,000	Estimated total ad displays
Clicks	1,200	Estimated ad clicks
CTR	3.75%	Clicks ÷ impressions
Leads	120	Estimated captured leads
CPL	■83.33	■10,000 ÷ 120 leads

Key Formulae

CTR = (Clicks ÷ Impressions) × 100

CPC = Spend ÷ Clicks

CPL = Spend ÷ Leads

Conversion Rate = (Conversions ÷ Clicks) × 100

11. Performance Visualization & A/B Testing

12. A/B Testing Analysis

Element	Ad A	Ad B
Message	Learn Digital Marketing	Build Your Digital Career
Projected CTR	2.8%	3.7%
Projected Leads	65	90
Projected CPL	■92	■72
Decision	Keep testing	Preferred direction

Based on the hypothetical data, Ad B is the stronger concept because it combines a higher projected CTR with more projected leads and a lower projected CPL. In a real campaign, this conclusion should only be made after statistically meaningful testing and actual delivery data.

13. Optimization Strategy

Observation	Optimization Action
Low CTR	Test new headline, hook, image and CTA
High clicks but low leads	Improve landing page/lead form relevance
High CPL	Shift budget toward stronger audience/creative combinations
One placement performs better	Increase testing budget for the stronger placement
Creative fatigue	Refresh visuals and messaging
Strong video engagement	Build a retargeting audience from engaged viewers

Retargeting Plan

Create a second-stage audience from people who interacted with the ads but did not submit a lead. The retargeting message should be more specific, such as course benefits, project-based learning or a limited-time information session.

14. Reflection: What Worked and What Did Not

What Worked — Based on the Simulation

- Career-focused messaging directly connects the learning offer with a clear user goal.
- Audience segmentation makes it possible to compare students, graduates and professionals.
- Carousel format provides space to showcase multiple course categories.
- A/B testing creates a structured basis for creative improvement.

What Could Be Improved

- The simulation does not contain real delivery data, so performance conclusions are directional only.
- More creative variants would be required for stronger testing.
- Landing-page quality could materially affect lead conversion.
- Actual audience response should determine final budget allocation.

Future Recommendations

1. Test multiple hooks and visual styles.
2. Create dedicated landing pages for each major course category.
3. Build retargeting audiences from website visitors and ad engagers.
4. Use actual campaign data to calculate CTR, CPC, CPL and conversion rate.
5. Scale only after identifying a repeatable combination of audience, creative and offer.

15. Key Learnings

Skill	Learning Outcome
Campaign Planning	Translate a business goal into an advertising objective
Audience Targeting	Define relevant segments using demographics and interests
Creative Strategy	Match ad format and message to the target audience
Budget Planning	Allocate a controlled test budget across segments
Analytics	Interpret CTR, clicks, reach, impressions, leads and CPL
Optimization	Use performance insights to improve future campaigns
Reporting	Present strategy, creatives, results and recommendations clearly

16. Conclusion

The LearnSphere Facebook Ads Practice Campaign demonstrates the end-to-end process of planning and evaluating a paid social media campaign. The project begins with a clearly defined business and lead-generation objective, develops audience segments and creatives, establishes a structured campaign and budget, and concludes with analytics, A/B testing, optimization and future recommendations.

The most important practical lesson is that campaign success should not be judged by a single metric. A strong campaign balances relevance, creative quality, audience fit, cost efficiency and conversion performance.

Project Status: Completed as a simulated practice campaign.

Data Note: All performance numbers in this report are hypothetical and are included only to demonstrate reporting methodology.

17. Final Submission Checklist

Requirement	Status / Deliverable
Imaginary business/platform	LearnSphere business profile
Campaign objective	Lead Generation
Budget & bid allocation	■10,000 hypothetical plan
Ad formats	Image + Video + Carousel
Target audience	3 segmented audiences
Ad content	Primary text, headline, CTA and concepts
Campaign setup	Campaign → Ad Set → Ad framework
Analytics/reporting	Metrics table + graphs
Optimization	A/B testing + optimization actions
Reflection	What worked / what could improve
Future recommendations	Retargeting + creative + budget recommendations
Final report	Professional PDF project

Ready-to-submit project report. Before submitting, replace any hypothetical figures with real results if you actually run a live campaign, and attach any screenshots required by your mentor.
