

WEBSITE AUDITING & DIGITAL MARKETING

Simplilearn — Detailed Website Audit, SEO, Content & Paid Advertising Plan

Academic Capstone Project

Chosen Website: Simplilearn

Project Duration: 10 Weeks

Core Areas: Website Audit • UX • SEO • Content Marketing • Social Media • Google Ads • Analytics

Prepared as a practical digital marketing implementation plan. All projected traffic, conversion and budget figures are planning assumptions for academic use.

1. Executive Summary

This project evaluates Simplilearn as an e-learning platform and proposes a structured digital marketing improvement plan. The plan combines website usability, technical and on-page SEO, content marketing, social media, Google Ads and analytics. The objective is to increase qualified organic traffic, improve engagement, generate more course enquiries and support measurable conversions.

Primary Business Goal

Create a stronger acquisition funnel: **Search/Social/Ads** → **Landing Page** → **Course Exploration** → **Lead/Enquiry** → **Conversion**.

Key project outcomes

Area	Planned Outcome
Website UX	Cleaner navigation, stronger CTAs, mobile-first landing pages
SEO	Keyword clusters, technical fixes, internal linking and content optimization
Content	Blogs, course guides, comparison pages, videos and social content
Paid Ads	Google Search campaigns focused on high-intent course keywords
Analytics	GA4-style KPI framework, conversion events and monthly reporting

2. Project Objectives & KPI Framework

The project objectives are designed to match the assignment requirements and provide measurable indicators.

Objective 1 — Website Audit

Identify content, on-page, off-page and technical SEO opportunities; review navigation, mobile experience, page speed, CTAs and conversion friction.

Objective 2 — Website Redesign

Create a redesign proposal for homepage, course pages and key landing pages with clearer hierarchy, trust signals and conversion paths.

Objective 3 — SEO Strategy

Build keyword groups around courses, certifications, career outcomes and high-intent learning searches.

Objective 4 — Content & Social

Build a repeatable editorial calendar connecting blogs, short-form social posts, video content and course landing pages.

Objective 5 — Paid Advertising

Plan Google Search campaigns using high-intent keywords, controlled budgets, conversion tracking and landing-page alignment.

Objective 6 — Measurement

Track traffic, engagement, leads, conversion rate, cost per lead and return on advertising spend.

3. Website Audit Plan

A practical audit should evaluate the website from both the user's perspective and the search-engine perspective.

Audit Area	What to Check	Priority
Technical SEO	Indexing, sitemap, robots, HTTPS, canonical tags, redirects, Core Web Vitals	High
On-page SEO	Title tags, meta descriptions, H1/H2 structure, keyword placement, image alt text	High
Content	Search intent, originality, freshness, readability, course relevance	High
UX/UI	Navigation, mobile layout, CTA visibility, trust elements, form friction	High
Internal Links	Course → category → blog → related course pathways	Medium
Off-page	Backlinks, digital PR, brand mentions and authority opportunities	Medium
Conversion	CTA clicks, enquiries, sign-ups, checkout/course-start actions	High

Illustrative Audit Score Before vs Target

Illustrative baseline scores only; replace them with actual audit-tool results when available.

4. Website Redesign Proposal

The redesign should focus on reducing the number of steps between a visitor and a relevant course decision.

Recommended homepage structure

Section	Recommended Improvement
Hero	Clear learning value proposition + primary CTA such as Explore Courses
Course Discovery	Search/filter by skill, career goal, level and learning format
Trust	Learner outcomes, ratings/reviews, partner logos and credible proof points
Career Outcomes	Show skills, job roles and pathways connected to each learning category
Content Hub	Blogs, guides, webinars and free resources supporting SEO
CTA Section	Repeat relevant CTA with urgency/value, without excessive pop-ups
Footer	Strong internal linking to courses, resources, support and legal pages

Mobile-first rule

Keep primary navigation simple, use large readable buttons, minimize form fields, optimize images and make course information scannable.

5. Complete SEO Strategy

SEO will be organized into topic clusters rather than isolated keywords.

Keyword cluster plan

Cluster	Example Search Intent	Content Asset
Course discovery	best online courses, online certification courses	Category landing pages
Skill learning	learn digital marketing, learn data analytics	Beginner guides
Career intent	courses for digital marketing jobs	Career guides + course pages
Comparison	course A vs course B, certification comparison	Comparison articles
Problem solving	how to learn SEO, how to become a data analyst	Step-by-step blogs

SEO implementation checklist

1. Technical cleanup → 2. Keyword mapping → 3. Metadata → 4. Content refresh → 5. Internal linking → 6. Schema opportunities → 7. Digital PR/backlinks → 8. Monthly monitoring.

Illustrative Organic Traffic Growth Target

6. Content Marketing Plan

The content plan should connect every piece of content to a search intent, learner problem or conversion goal.

Content Type	Frequency	Purpose
SEO Blogs	4/month	Capture informational search traffic
Course Guides	2/month	Support commercial intent
Comparison Pages	2/month	Capture high-intent evaluation searches
Short Videos	3/week	Awareness and engagement
Social Posts	4–5/week	Distribution and community engagement
Email/Newsletter	2/month	Nurture interested learners

Illustrative Monthly Content Mix

Best publishing window: use analytics to identify audience activity. As an initial test, publish educational content on weekday mornings and social content around lunch/evening; then optimize based on engagement data.

7. Social Media Promotion Strategy

Social activity should not be random. Each platform should have a defined role in the learner funnel.

Channel	Content Direction	CTA
Instagram	Reels, carousels, learner tips, career content	Explore course / Read guide
LinkedIn	Career insights, certifications, professional learning	View course / Register
YouTube	Tutorials, explainers, webinars, course previews	Learn more / Course page
Facebook	Community posts, educational content, remarketing	Explore / Enquire

Weekly Social Workflow

Monday: educational carousel → **Tuesday:** short video → **Wednesday:** learner/career tip → **Thursday:** course-related content → **Friday:** quiz/poll → **Weekend:** recap or long-form video.

8. Google Ads / Paid Advertising Strategy

The paid strategy is designed as a controlled pilot rather than an assumption of unlimited spend.

Recommended 30-day pilot budget

Campaign	Daily Budget	30-Day Budget
High-intent Search	■1,000	■30,000
Course/category Search	■600	■18,000
Remarketing/Display test	■300	■9,000
Total	■1,900/day	■57,000

Budget note

■57,000 is a proposed 30-day pilot budget for the academic plan. It is **not** a claim about Simplilearn's actual advertising spend.

Campaign structure

Campaign 1: Brand protection → Campaign 2: Course/high-intent keywords → Campaign 3: Career-intent keywords → Campaign 4: Remarketing test. Use negative keywords, location/language targeting, ad extensions and conversion tracking.

Illustrative Paid Media Allocation

9. Analytics, Evaluation & Reporting

A successful campaign is evaluated through a funnel rather than one metric.

Stage	KPI	Illustrative Target
Awareness	Impressions / Reach	+20–30% over baseline
Acquisition	Organic sessions	+25% by Month 6
Engagement	Engaged sessions / time	+15%
Conversion	Lead/course enquiry rate	2–4% test range
Paid	CPC / CPL / ROAS	Optimize monthly
Retention	Email engagement / return visits	Steady improvement

Illustrative Conversion-Rate Improvement

Reporting cadence: weekly campaign check, monthly performance report, and quarterly strategy review.

10. Budget, Cost Model & Evaluation

The budget below separates paid media from implementation resources so the project can be evaluated realistically.

Item	Proposed Cost	Purpose
Google Ads pilot	■57,000 / 30 days	Search + course + remarketing test
Creative/content tools	■8,000 / month	Design, editing and content production allowance
SEO/analytics tools	■5,000 / month	Keyword, audit and reporting allowance
Contingency	■5,000	Testing and unexpected execution needs
Illustrative first-month total	■75,000	Planning estimate only

Evaluation example

If a paid campaign spends ■57,000 and generates 100 qualified leads, the illustrative cost per lead is ■570. If 10 of those leads convert into customers and average contribution is ■8,000 per customer, the illustrative revenue contribution is ■80,000. This example gives a positive revenue-to-ad-spend ratio, but actual profitability depends on margins, refunds and other costs.

11. 10-Week Project Timeline

Week	Major Activity	Deliverable
1	Select website + baseline audit	Audit checklist + baseline
2	Technical + on-page SEO review	SEO issue list
3	UX research + redesign plan	Wireframe/redesign proposal
4	Keyword research + content mapping	Keyword map + calendar
5	Content production plan	Blog/social/video plan
6	Google Ads campaign design	Campaign + budget proposal
7	Tracking + landing-page implementation	Measurement framework
8	Launch/test digital strategy	Pilot implementation
9	Analyze results	Analytics report
10	Compile findings + presentation	Final report + presentation

Illustrative Workload by Phase

12. Best Time to Publish & Optimize

There is no universal best time. The correct approach is to start with test windows and then use actual audience analytics to shift the schedule.

Activity	Initial Test Window	Optimization Rule
SEO blogs	Weekday morning	Compare impressions/clicks after indexing
LinkedIn	Weekday working hours	Optimize for engagement and clicks
Instagram/Reels	Lunch + evening	Test 2–3 slots for 4 weeks
YouTube	Evening / weekend test	Use audience retention and watch time
Google Ads	Always-on initially	Shift spend to high-converting hours
Email	Weekday morning test	Optimize open/click/conversion rate

Decision rule

Do not permanently choose a posting time based only on generic industry advice. Compare CTR, engagement, qualified traffic and conversion rate, then move budget and publishing effort toward the strongest windows.

13. Final Deliverables & Recommendations

The completed capstone should contain the following deliverables:

Deliverable	Contents
Website Audit Report	Technical, on-page, UX, content, off-page and conversion findings
Website Redesign Proposal	Page structure, navigation, CTA and content improvements
SEO Strategy	Keyword clusters, on-page plan, technical actions, internal links
Content Marketing Plan	Editorial calendar, formats, topics and distribution
Paid Advertising Plan	Google Ads structure, budget, targeting, ad groups and KPIs
Analytics Plan	Events, KPIs, dashboards and reporting cadence
Presentation	Key findings, graphs, recommendations and implementation roadmap

Final recommendation

Prioritize the highest-impact fixes first: technical/UX issues → high-intent landing pages → keyword/content clusters → conversion tracking → controlled Google Ads testing → continuous optimization. This creates a measurable digital marketing system rather than isolated activities.

Academic Note

All costs, traffic projections, conversion rates and performance graphs in this project are illustrative planning figures. They should be replaced with verified website analytics and actual advertising-platform data if the project is implemented in the real world.
